SUMMARY

Third-year Information Technology student and self-taught developer building at the intersection of Web3, AI, and software engineering. I enjoy turning ideas into working products — from smart contract tooling to data-driven applications — and have contributed to community-led Web3 initiatives, including hackathons and buildathons with organizations like the Stellar Development Foundation. Comfortable across 40+ tools and technologies spanning Python, machine learning, full-stack development with React and Node.js, and agentic AI systems, reflected in 3 production-oriented projects on my GitHub. Driven by curiosity, hands-on learning, and collaborating with builders who care about shipping real things.

EDUCATION

B.Tech, Information Technology | Government College of Engineering & Ceramic Technology *Aug 2024 – June 2028 | India*

- CGPA: 9.44 / 10.00
- Finalist, Hack4Bengal 4.0 — East India's largest hackathon.
- Certifications: Generative AI, Financial Literacy, Algorithmic Trading using Python.

Senior Secondary (Class XII), Science | India International School, Asansol (CBSE) *2024*

Secondary Education (Class X) | India International School, Asansol (CBSE) *2022*

EXPERIENCE

Data Analyst Intern | Zidio Development *Sep 2025 – Nov 2025 | Remote*

- Analyzed real-world datasets over a 3-month remote internship to uncover trends and actionable insights, building end-to-end data workflows — cleaning, preprocessing, feature engineering, and EDA — using Python, Pandas, NumPy, Matplotlib, and Scikit-learn.
- Developed and evaluated machine learning models for predictive analytics and created visualizations and reports to communicate findings to technical and non-technical stakeholders.
- Collaborated in a fully remote team of 5, strengthening problem-solving, analytical thinking, and project execution skills.

Data Science and Analytics Intern | Vital Skills *June 2025 | Delhi*

- Applied statistical methods and machine learning techniques to real-world datasets using Python, Pandas, NumPy, Matplotlib, and Scikit-learn.
- Practiced end-to-end data workflows, including preprocessing, visualization, and model evaluation, across project-based tasks.

FEATURED PROJECTS

ArbitPy — Python-to-Blockchain Compiler & Deployment Platform · Lead Developer, Team BROTHERHOOD

- Designed and built a compiler and transpiler that converts Python-style smart contract code into Solidity and Rust (Stylus) using AST parsing and semantic analysis, achieving up to 40% gas savings on Arbitrum.
- Developed and published arbitpy-sdk, a fully typed TypeScript SDK on npm that gives developers a one-line API to compile, deploy, and interact with contracts across 8+ EVM-compatible networks.
- Built a full-stack platform combining a React/TypeScript frontend with a Node.js/Express REST API and a Gemini-powered AI assistant for code review and gas optimization.
- Deployed and verified a live contract on the Arbitrum Sepolia testnet and containerized the platform with Docker for production.

Mycelium — Python-First Framework for Smart Contracts & Agentic Orchestration on Stellar

- Built core components of a Python-first framework that lets developers write, test, and deploy Stellar smart contracts without learning Rust or Soroban directly.
- Designed orchestration tooling that lets autonomous AI agents plan, execute, and monitor on-chain actions through a unified Python API.

Agentic-Exchange — Operating System for Autonomous AI Digital Labor on Algorand

- Architected a marketplace and settlement layer where autonomous AI agents list, discover, and transact for digital labor and services, with on-chain escrow enforced through Algorand smart contracts.
- Built the JavaScript/Node.js backend and Algorand SDK integration handling wallet interaction and transaction signing.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Solidity, SQL, Rust (working knowledge)

AI / Machine Learning: Generative AI, Predictive Modeling, Feature Engineering, EDA, Model Evaluation, Statistical Analysis, NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn

Full Stack Development: React, Next.js, Vite, Node.js, Express, FastAPI, Flask, REST APIs, Tailwind CSS, MySQL

Web3 / Blockchain: Solidity, Foundry, Hardhat, Ethers.js, Viem, Wagmi, OpenZeppelin · Ethereum, Arbitrum, Solana, Stellar, Algorand, Polygon

Tools, Practices & Analytics: Git, GitHub, Docker, CI/CD, REST API Design, Jupyter Notebook, Algorithmic Trading, Financial Market Analysis, Power BI
